Service Capabilities Statement

Nimbus Digital Services Pvt. Ltd.

Version 3.0, August 2026

Read this first. This is a marketing capability statement. It describes what Nimbus can do and how. It is **not** proof of completed project experience. For eligibility, use completion certificates (folder 04) and the project register (KB-PRJ-REG).

1. Data centre operations and maintenance

Nimbus runs 24x7 operations of Tier-III-designed data centres: server, virtualisation, storage, backup, network and security device administration, OEM coordination, capacity management and SLA reporting. Our largest completed engagement is a 42-rack State Data Centre.

- VMware vSphere, vSAN, NSX; OpenStack
- Windows, RHEL, Ubuntu, AIX
- NetApp, Dell, HPE storage; Veeam, Commvault backup
- Cisco Nexus, Juniper, Arista data centre networks
- ITIL 4 incident, problem, change, configuration management

2. Disaster recovery services

Design, build and operation of DR sites, replication, DR runbooks and drills. Typical targets we design for are RPO 15 minutes and RTO 4 hours for critical applications; actual achievement depends on the client's application architecture and bandwidth.

- Storage and hypervisor replication (Zerto, SRM)
- Application-consistent backups
- Quarterly DR drills and annual full switchover

3. Network operations centre

24x7 NOC services from client sites or our Pune remote NOC: monitoring of WAN, SWAN and campus networks, ISP coordination, change execution and daily network health reporting.

- NMS: OpsCentral NMS, SolarWinds
- MPLS, SD-WAN, internet edge
- Up to 1,200 points of presence monitored in one engagement (as consortium member)

4. Hybrid cloud

Landing zone design, migration factory, cloud operations and FinOps across private OpenStack/VMware clouds and MeitY-empanelled public cloud providers. Data residency in India is a design constraint in all government engagements.

- Terraform, Ansible, Kubernetes
- Self-service portals
- Monthly cost and usage reporting

5. Security operations

SOC operations (L1/L2), SIEM use-case engineering, vulnerability management and CERT-In incident reporting support. Our ISMS is certified to ISO/IEC 27001:2022 for the Bengaluru and Pune delivery centres.

- SIEM, SOAR, EDR, PAM operations
- VAPT coordination and closure tracking
- ISO 27001 implementation support for clients

6. Application services

Application maintenance and modernisation (Java, .NET, APIs). Nimbus does not present application projects as data centre experience.

- Spring Boot, React, Kafka

- CRM and portal modernisation
- Test automation

7. Tools and partnerships

Area	Standard tool	Partnership status
ITSM, EMS, NMS	OpsCentral suite (fictional OEM)	Authorised partner since 2019; bid-specific MAF issued on request
Backup	Veeam, Commvault	Registered partner
Virtualisation	VMware, OpenStack	Registered partner / community
Cloud	MeitY-empanelled providers	Consulting partner with two providers

8. Service catalogue (managed services)

Service	Included activities	Typical SLA we design for
Server and virtualisation O&M	Monitoring, patching, hardening, capacity, OEM coordination	Availability 99.9% to 99.95% monthly
Storage and backup	Provisioning, replication, backup jobs, restoration tests	Backup success >= 99%
Network and security devices	Configuration, change, firmware, rule reviews	P1 response 15 min
NOC	24x7 monitoring, ISP coordination, daily reports	Detection within 5 minutes of alert
DR operations	Replication health, runbooks, drills	RPO / RTO per contract
Security monitoring	SIEM triage, escalation, use-case tuning	Escalation within 30 minutes of confirmation
Service desk	Multi-channel helpdesk, service catalogue	90% calls answered within 60 seconds

SLA values in this table are design targets, not results. Results for completed projects are in each case study.

9. Engagement models

- Fixed-price managed services with quarterly payments and SLA-linked deductions (most government contracts).
- Time-and-material staffing for transitions and projects.
- Outcome-based pricing for automation (limited use).

10. What we do not offer

- Physical facility management (power, cooling, fire suppression); we coordinate with facility vendors.
- ISO/IEC 20000-1 certified service management (not held; gap analysis in progress).
- CMMI Maturity Level 4 or 5 (Nimbus is appraised at Maturity Level 3).
- ISO 22301 certified business continuity management (not held).

11. Differentiators (claims to be proven case by case)

Experience running state government data centres under SLA penalties; a single tool stack across ITSM, EMS and NMS; a remote NOC for L2/L3 back-up; and a methodology for transition from incumbent operators with shadowing and reverse shadowing. Each claim in a proposal must cite a project, a policy or a certificate from this knowledge base.
